

Professional Quality, Fit and Finish

PD WALL units include an aluminum tunnel designed to connect the interior and exterior frame. The tunnel ensures a professional fit and finish that provides a quality appearance for your home.

Aluminum Tunnel

The bottom tunnel section is sloped to prevent water from entering. The tunnel will not rust, has no sharp edges and is easy to keep clean.

PD WALL units can be installed into stud, brick, block or cement walls up to 12 inches thick.
